# **QUALITY OF SERVICE MONITORING REPORT- THIRD QUARTER 2021**

**Department of Engineering & Infrastructure**

**October 2021**

**Table of Contents**

- 1. Background ..... 3**
- 2. Definition of Key Performance Indicators (KPIs) Measured ..... 3**
- 3. Snapshot of Quality of Service Monitoring Results ..... 4**
- 4. Detailed Quality of Service Analysis for Third Quarter 2021 ..... 5**
  - 4.1 SDCCCH Call Drop Rate ..... 5**
  - 4.2 TCH Drop Call Rate..... 5**
  - 4.3 Call Setup Success Rate..... 6**
  - 4.4 Handover Success Rate ..... 6**
  - 4.5 TCH Congestion Rate..... 7**
  - 4.6 Network Availability..... 7**

## 1. Background

In accordance with the mandate of the Commission to ensure fair competition and protect the consumer as provided for in Section 9 (2) (a) & (b) of the Telecommunications Act 2006 as amended, and the Quality of Service (QoS) obligations outlined in the relevant Sections of the cellular mobile licenses for Operators, the QoS monitoring, and reporting was outsourced to Blue Ribbon Solutions to measure on equal terms the compliance of licensees to pre-defined Key Performance Indicators (KPIs).

The measurement of KPIs was carried out on four (4) Mobile Network Operators (MNOs), namely Orange, Africell, Qcell and SIERRATEL, using raw files collected on a daily basis from the Base Station Controllers (BSCs) of the four (4) operators and dumped into the servers hosted by Blue Ribbon, with the view of analyzing technical parameters that translate into end-user's perception of the quality of service.

The third quarter 2021 report provides obligatory monitoring and enforcement of 2G voice and voice quality of six (6) consumer-oriented services, evaluated using KPIs of radio network parameters including Network Availability, Call Setup Success Rate, Handover Success Rate, Stand-alone Dedicated Control Channel (SDCCH) call drop rate, Traffic Channel (TCH) call drop rate and TCH congestion rate.

## 2. Definition of Key Performance Indicators (KPIs) Measured

**Call Setup Success Rate (CSSR):** A Call Setup Success Rate (CSSR) indicates the probability of successful calls initiated by the mobile station. The CSSR is an important KPI for evaluating the network performance. If this KPI is too low, the subscribers are unlikely to make calls successfully. This is measured using performance monitoring systems by analyzing CDRs of Operator's networks, test stations and drive test system. The threshold for call setup success rate is  $\geq 95\%$ .

**Handover Success Rate:** This is the ratio of the number of successful handovers to the total number of handover requests. Handover capability enables users to communicate continuously when they traverse different cells. It is measured using performance monitoring systems through accessing CDRs of Operator's networks, test stations and drive test system. The threshold for handover success rate is  $\geq 95\%$ .

**Network Availability:** Network availability is the ratio of probable attempts for mobile network services to total number of attempts. The calculation of network availability gives the percentage values of the site availability on the network. This is measured using performance monitoring systems by analyzing CDRs of Operator's networks, test stations and drive test system. The threshold for network availability is  $\geq 95\%$ .

**Traffic Channel (TCH) Drop Call Rate:** The traffic channels (TCHs) are a combination of voice and data signals (time slot assignments) that exist within a communication channel. The TCH call drop rate refers to the ratio of call drops to successful TCH seizures after the Base Station Controller (BSC) successfully assigns TCHs to mobile stations. It is measured using performance monitoring systems by analyzing CDRs of Operator's networks, test stations and drive test system. The threshold for TCH drop call rate is  $\leq 2\%$ .

**TCH Congestion Rate:** The TCH congestion rate is the proportion of the number of TCH assignment failures to the number of TCH seizure requests. If the TCH congestion rate is high, the

network service quality deteriorates. It is measured using performance monitoring systems by analyzing CDRs of Operator's networks, test stations and drive test system. The threshold for TCH congestion rate is  $\leq 1.5\%$

**Stand-alone Dedicated Control Channel (SDCCH) Call Drop Rate:** The Stand-alone Dedicated Control Channel (SDCCH) is a signaling channel that exists between GSM Mobile and GSM Base Stations. The SDCCH is used for most short transactions, including initial call setup, registration and SMS transfer. The SDCCH call drop rate indicates the probability of call drops when the mobile station occupies the SDCCH. It is measured using performance monitoring systems by analyzing CDRs of Operator's networks, test stations and drive test system. The threshold for SDCCH drop call rate is  $\leq 1.5\%$ .

### 3. Snapshot of Quality of Service Monitoring Results

The table below provides an average summary of monthly performance measurements of the six (6) KPIs compared with the respective thresholds highlighted in **GREEN**. The figures highlighted in **RED** indicate that the Operator did not meet the pre-defined threshold of a particular KPI, while the figures indicated in **YELLOW** depict that the measurement counters of the BSCs were not recorded, and therefore provided a zero after a KPI performance analysis.

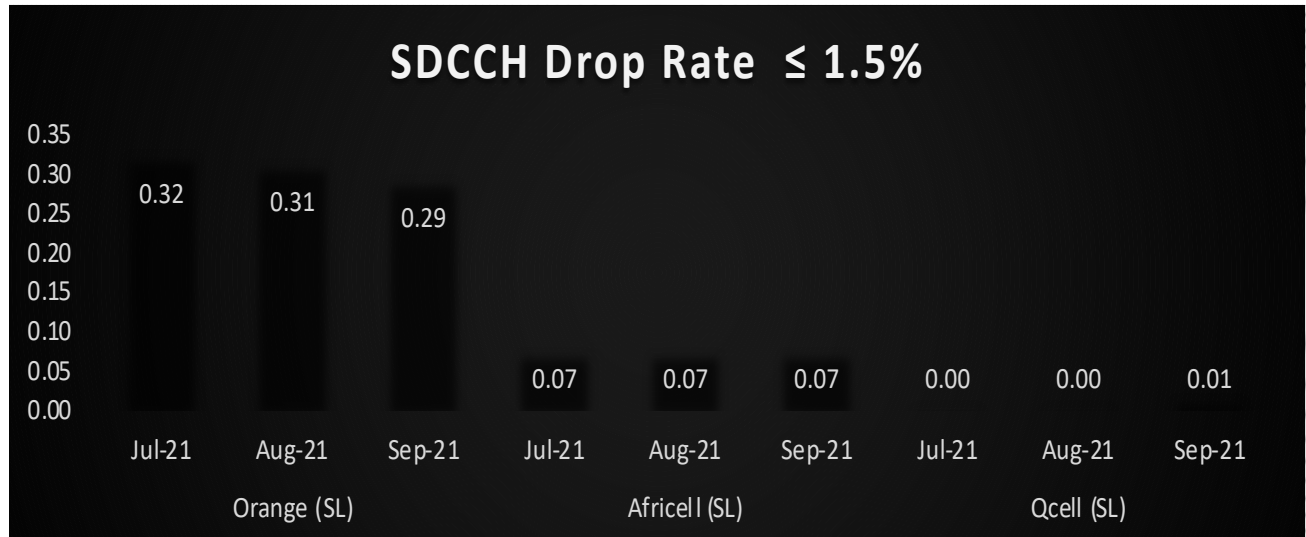

Operator	KPI	SDCC H Drop Rate	TCH Drop Call Rate	Call Setup Success Rate	Handover Success Rate	TCH Congestion Rate	Network Availability
	Threshold	$\leq 1.5\%$	$\leq 2.0\%$	$\geq 95\%$	$\geq 95\%$	$\leq 1.5\%$	$\geq 95\%$
Orange (SL)	Jul-21	0.32	0.54	98.94	98.39	0.07	99.61
	Aug-21	0.31	0.55	98.88	98.41	0.12	99.61
	Sep-21	0.29	0.54	98.89	98.29	0.12	99.57
Africell (SL)	Jul-21	0.07	0.24	99.17	98.67	0.06	98.97
	Aug-21	0.07	0.25	99.16	98.54	0.06	99.12
	Sep-21	0.07	0.25	98.98	98.55	0.05	98.97
Qcell (SL)	Jul-21	0.00	0.24	99.48	95.87	0.01	99.34
	Aug-21	0.00	0.25	99.45	96.09	0.00	99.76
	Sep-21	0.01	0.23	99.16	96.38	0.12	99.57
Sierratel	Jul-21	0.00	0.00	0.00	0.00	0.00	0.00
	Aug-21	0.00	0.00	0.00	0.00	0.00	0.00
	Sep-21	0.00	0.00	0.00	0.00	0.00	0.00
<b>KEY</b>							
		Failed to meet KPI Threshold					
		Measurement Counters not provided by Operators					

#### 4. Detailed Quality of Service Analysis for Third Quarter 2021

The three (3) mobile network operators, namely Orange, Africell and Qcell met and or exceeded all respective pre-defined thresholds highlighted in GREEN in the table above. A detailed analysis of the six (6) KPIs for the three (3) mobile network operators who provided measurement counters is provided hereafter.

##### 4.1 SDCCH Call Drop Rate

The bar chart below represents the analysis of SDCCH call drop rate for the third quarter of 2021. During this period, Orange, Africell and Qcell met the pre-defined threshold  $\leq 1.5\%$  for this KPI.

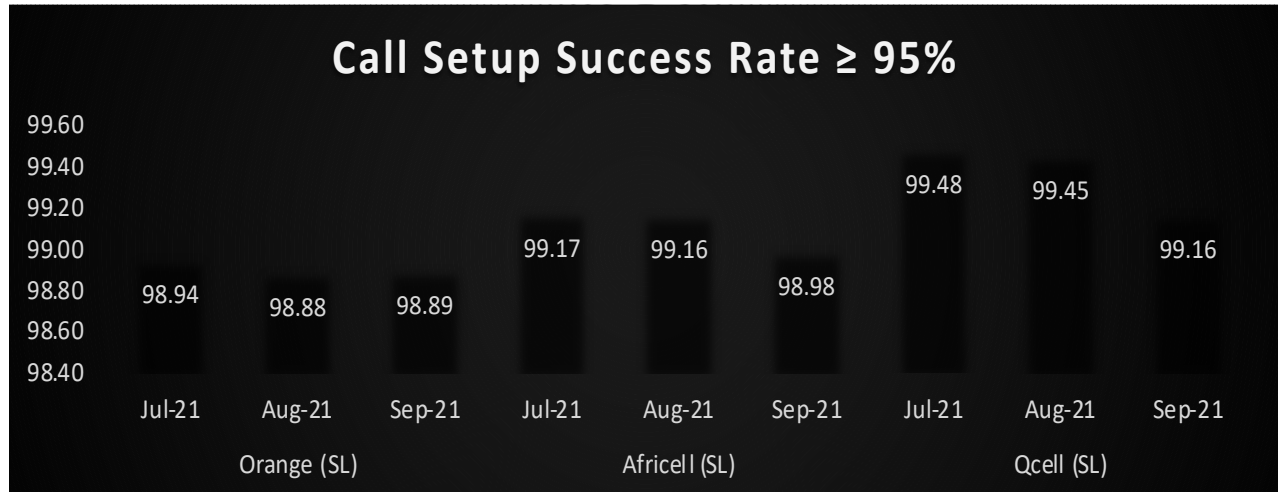

##### 4.2 TCH Drop Call Rate

The bar chart below depicts the analysis of TCH drop call rate for third quarter of 2021. Orange, Africell and Qcell met the pre-defined threshold of  $\leq 2\%$  for this KPI.

### 4.3 Call Setup Success Rate

The bar chart below represents the analysis of Call Setup Success Rate for the third quarter of 2021. Orange, Africell and Qcell met the pre-defined threshold of  $\geq 95\%$  for this KPI.

### 4.4 Handover Success Rate

The bar chart below illustrates the analysis of Handover Success rate for the third quarter of 2021. Orange, Africell and Qcell met the pre-defined threshold of  $\geq 95\%$  for this KPI.

#### 4.5 TCH Congestion Rate

The bar chart below shows the analysis of TCH congestion rate for the third quarter of 2021. During this period, Africell, Orange and Qcell all met the pre-defined threshold of  $\leq 1.5\%$  for this KPI.

#### 4.6 Network Availability

The bar chart below shows the analysis of Network Availability for the third quarter of 2021. For this KPI, all the mobile operators met the pre-defined threshold of  $\geq 95\%$  for this KPI.
